Project Summary

Analyzed 55,500 healthcare records using Excel Pivot Tables, Pivot Charts, KPIs and interactive Slicers to identify billing, admission, insurance and patient stay patterns. Built Pivot Tables and Pivot Charts to study billing, admissions, insurance coverage, and patient stay patterns. Designed an interactive dashboard to present key healthcare insights.

Key Insights

- Obesity patients recorded the highest average billing amount (~25,806).
- Elective admissions accounted for the largest share of hospital admissions.
- Cigna covered the highest number of patients among insurance providers.
- Average length of stay remained consistent across medical conditions (~15.5 days).
